Community/ Technical College

Industry Apprentice

High School

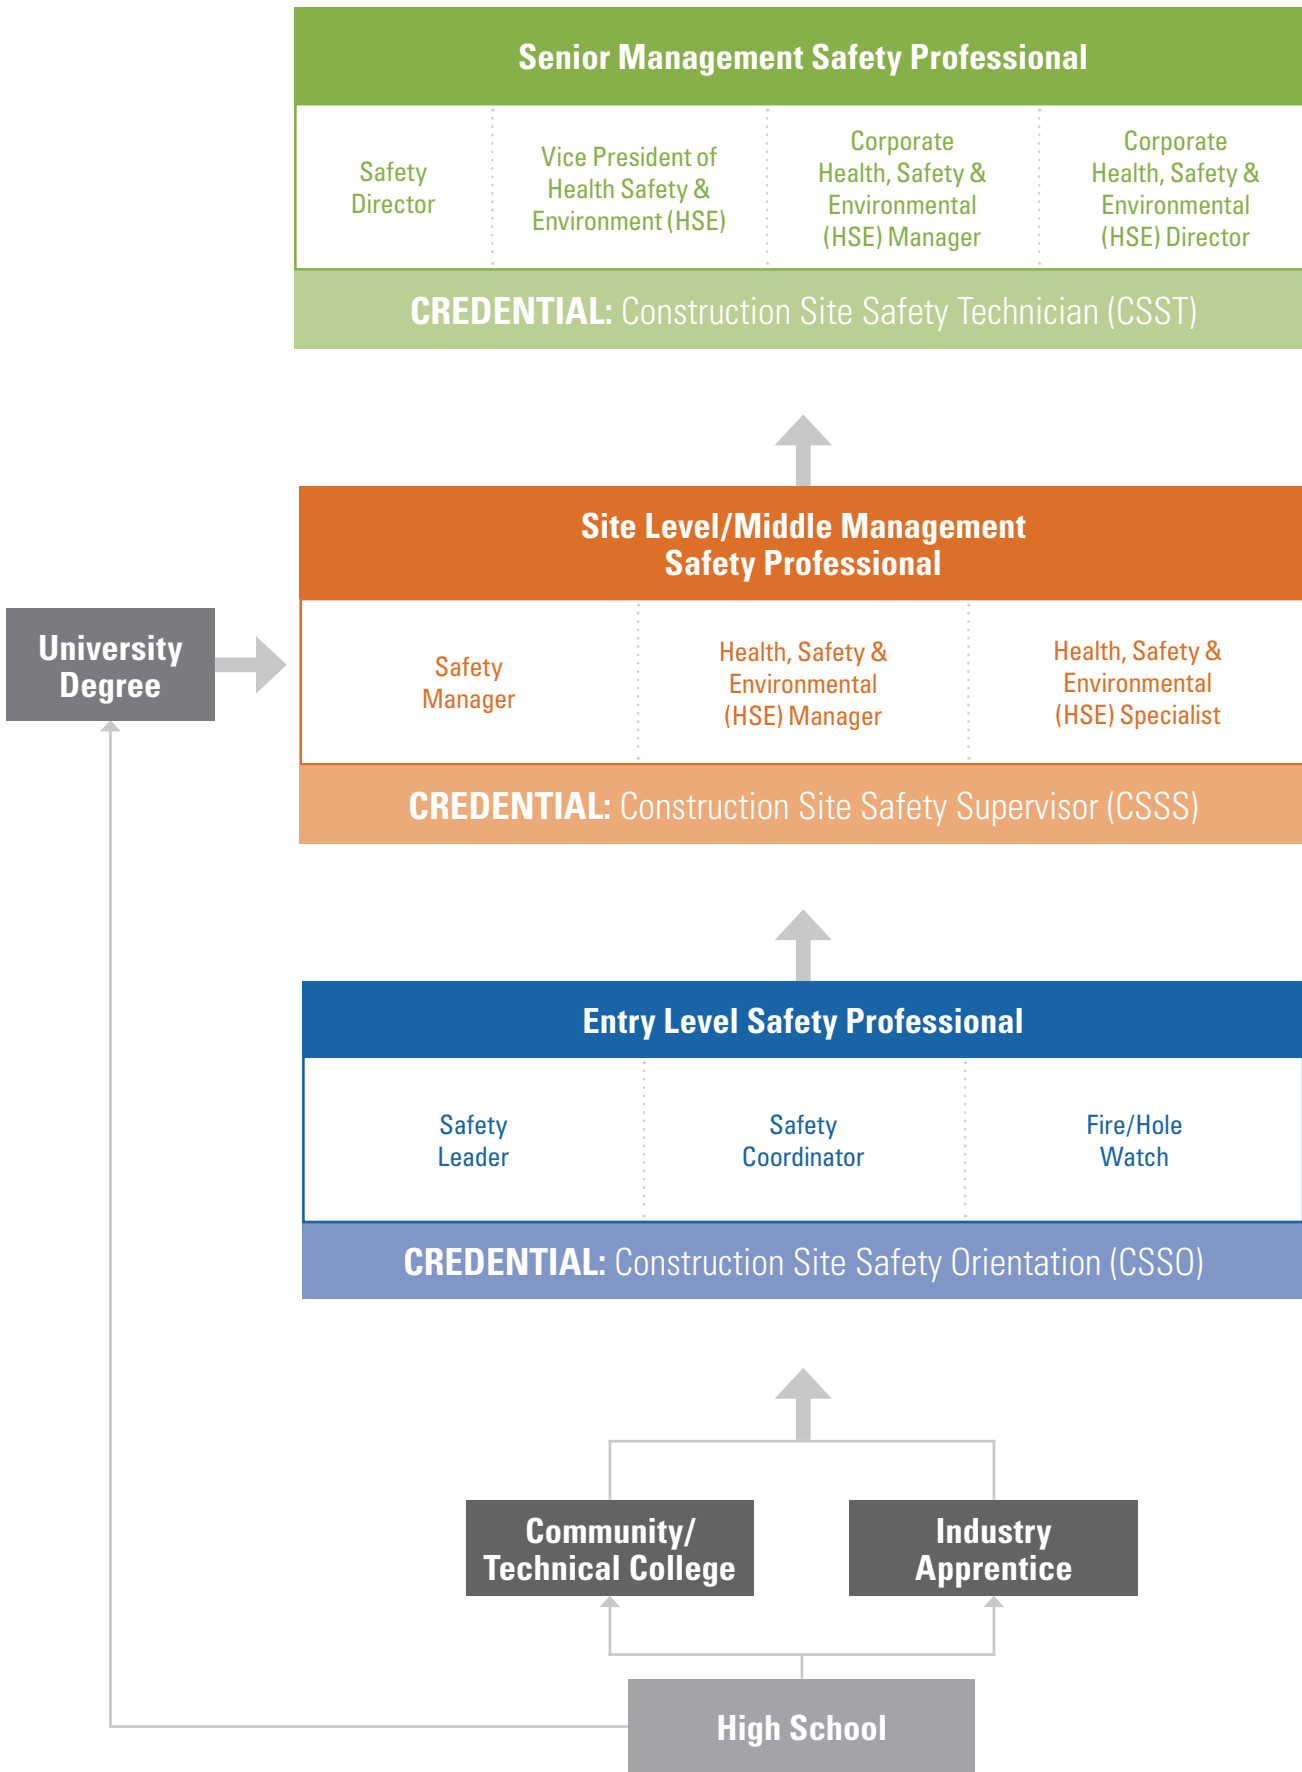

Construction Site Safety Orientation (CSSO)
The CSSO is designed to provide all trainees with a fundamental understanding of jobsite safety, including common causes of workplace incidents and accidents and how to avoid them. It also covers important basic safety topics such as working from heights and working in confined spaces.

Construction Site Safety Supervisor (CSSS)
The CSSS is designed for project personnel responsible for safety on the job site, and specifically to provide field managers the expertise to understand safety to a high degree.

Construction Site Safety Technician (CSST)
The CSST is designed for industry safety professionals, company safety officers, current site safety coordinators or foremen seeking to improve safety knowledge and skills. The CSST is appropriate for an experienced journey-level craft professional seeking a path into the safety profession.
